Klinghammer SIA 220

beader

The machine is used for beading round can bodies. Since it operates with beading shafts mounted on one side, it can be beaded not only can bodies but also finished cans with the bottom already seamed. This is an advantage when cans are produced on automatic flanging machines, since previously flanging cans can buckle in the flanges during flanging. Protective beading and external beading production is possible.

Technical specifications

CazProductNumber CPN	5816
Name	Klinghammer SIA 220
Tooling	230~217 mm
Can height min.	50 mm
Can height max.	300 mm
Can / Ends diameter minimum	80 mm
Can / Ends diameter maximum	230 mm
Can shape	conical
Speed (up to)	100-240 cans per minute
